

The Sauna. Made for your room.

CATALOGUE 2026 · SAUNA LINE

About us

Since 2011, Sauna Line has designed and built exclusive indoor saunas for clients who expect more than the standard. Every commission is treated individually: refined aesthetics, precise execution, and experience gathered over years of work with demanding clients.

We work only with carefully selected materials and proven technology, attentive to every detail that affects comfort and durability. The Pro Line, Modern Line, Best Line, Perfect Line and Infrared Line collections answer distinct needs: from the classical Finnish sauna to minimal modern forms and infrared technology.

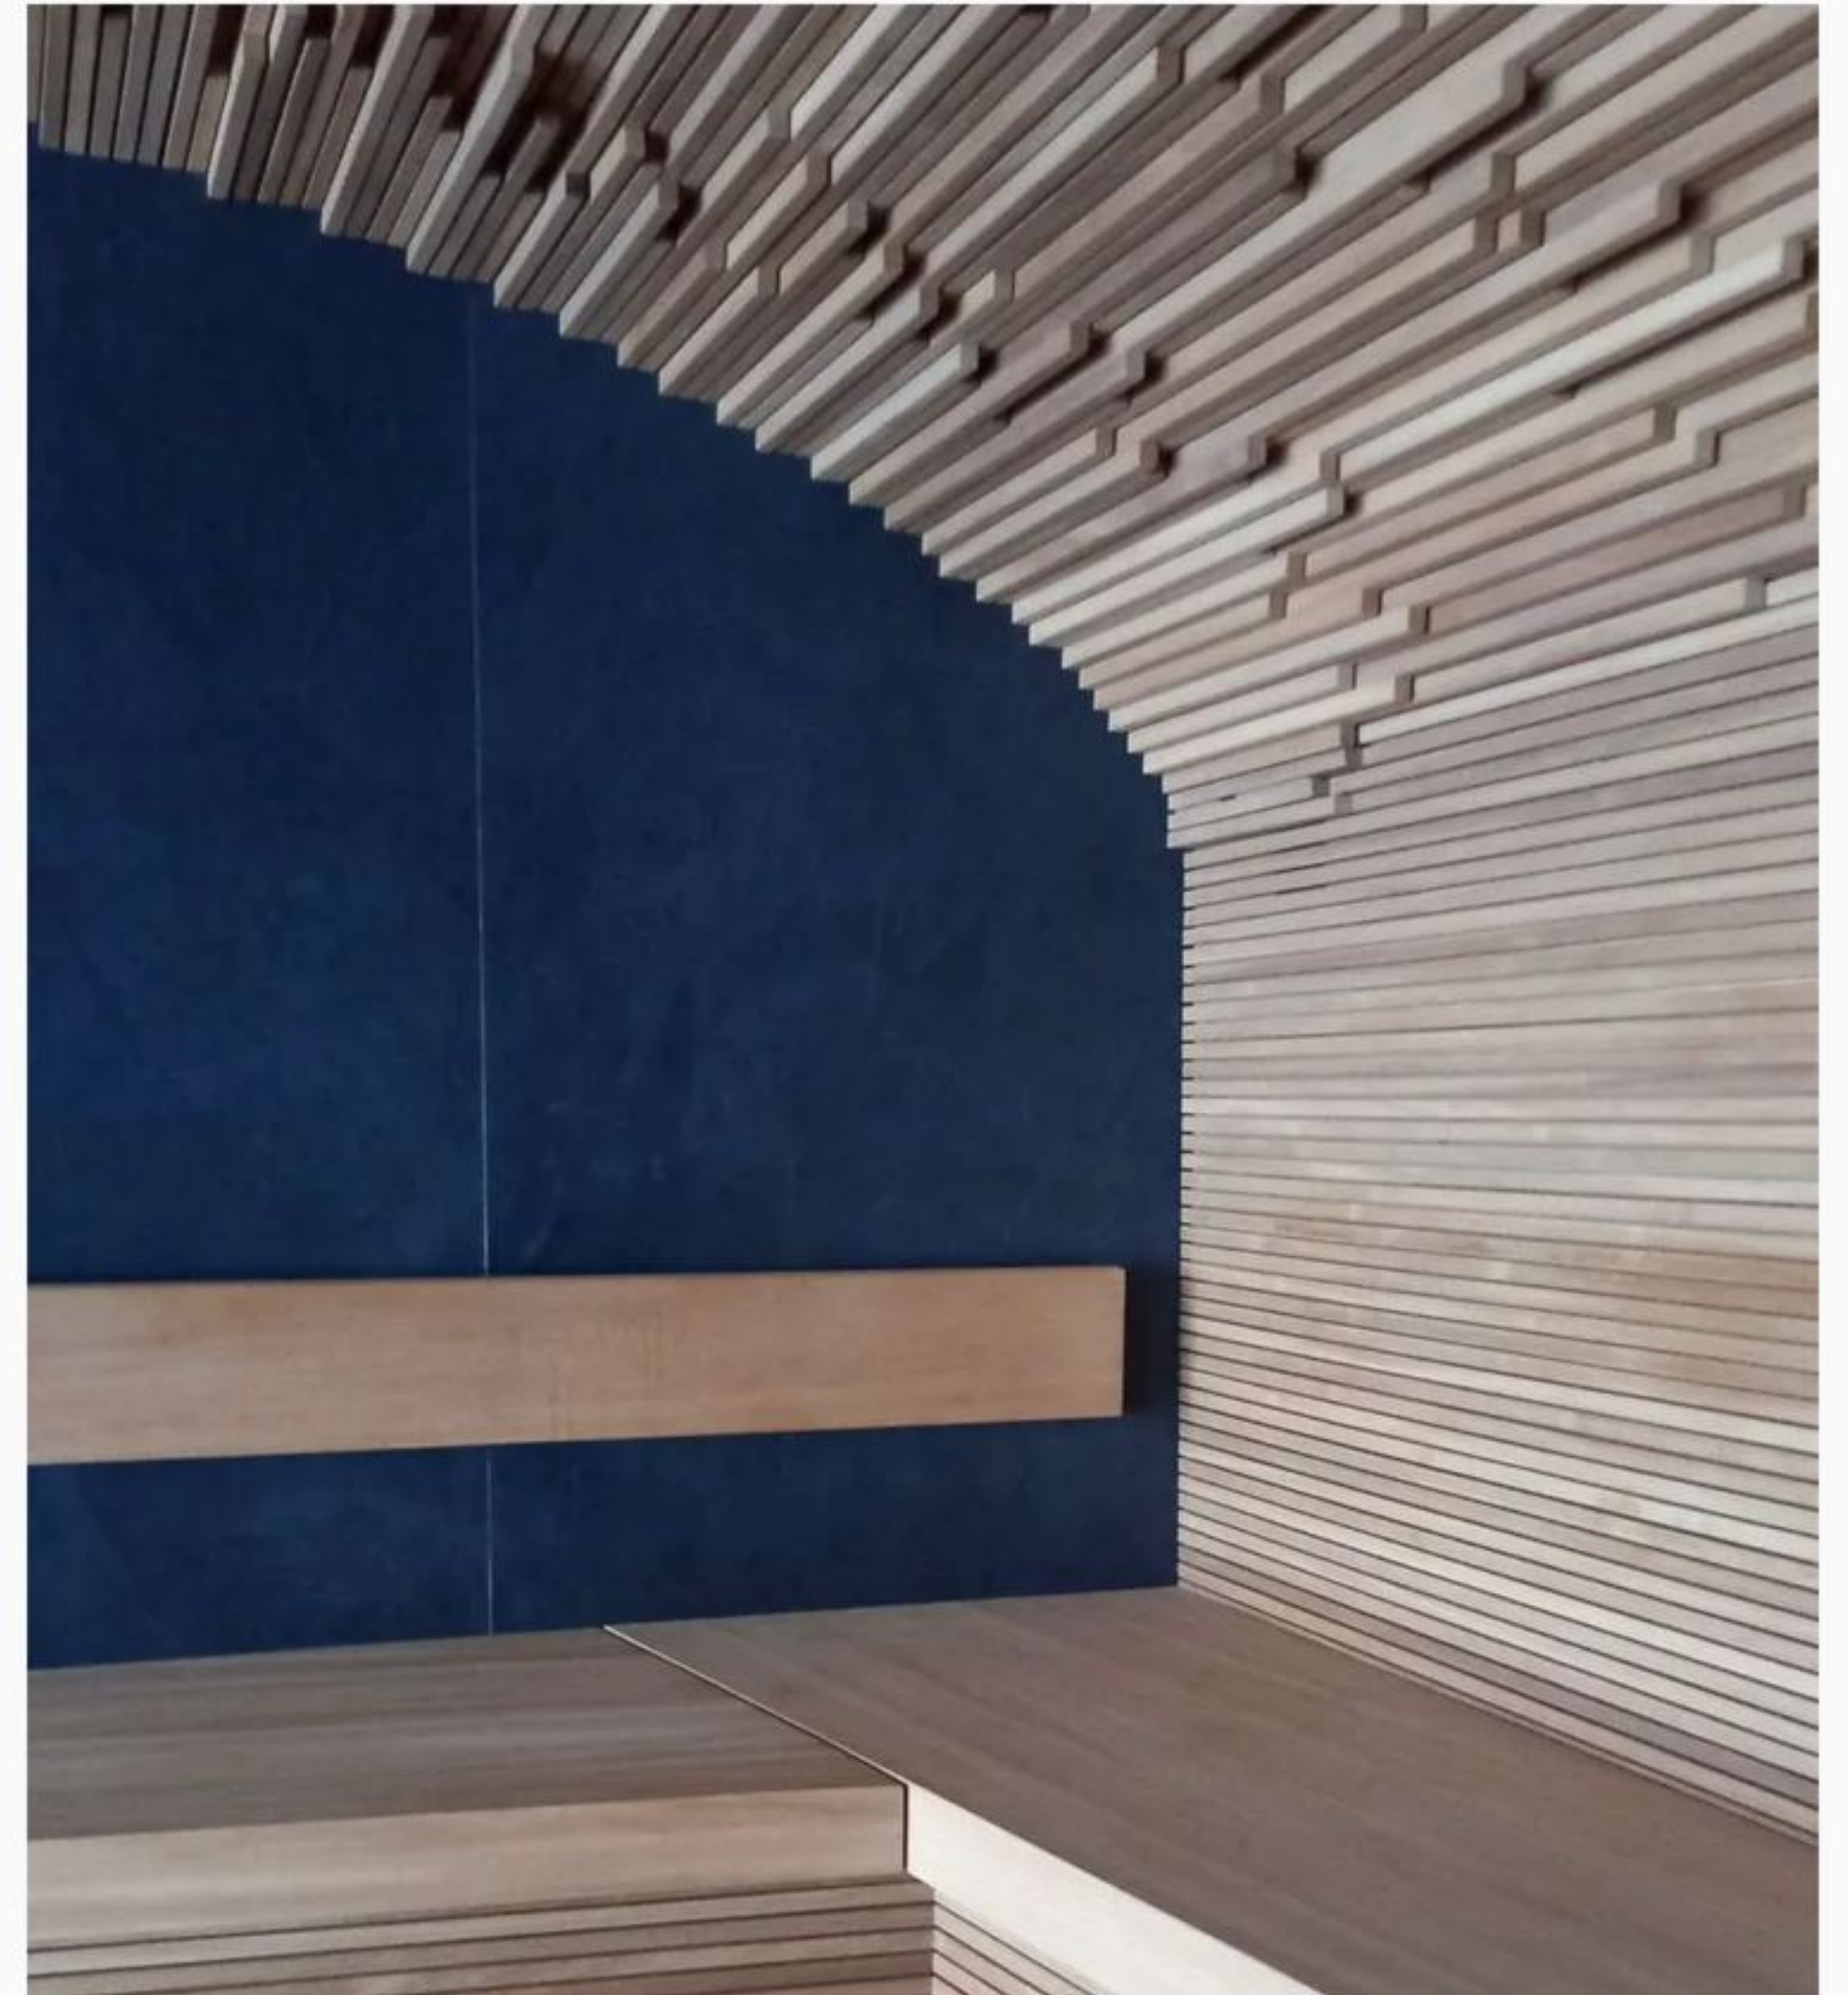

Our strength is complete design freedom, made possible by our own production facility and advanced woodworking. We build saunas to any dimension, fitted exactly to a particular space and its architecture.

We work with private clients, architects, and interior designers looking for bespoke, fully resolved solutions.

02 — OUR IDEA

A sauna should belong to the room it stands in.

We start with the room: its proportions, light and materials. Then we design a sauna that reads as part of the house, and build it by hand in our workshop in Krosno.

Made by hand

Our own production facility and advanced woodworking give us complete design freedom. We build saunas to any dimension, fitted to the space, never the other way around.

Benches, portals and handles are made by hand, from a single species of wood. Backrests are milled from solid 28 mm elements, and every sauna is trial-assembled in full before it leaves the workshop.

Perfect Line

O5

Infrared Line

O1

Pro Line

Pro Line

A sauna designed for those who want to be surrounded by comfort and the beauty of nature. Walls finished in vertically laid wooden lamellas give the space a subtle but decisive structure. Benches of a simple, geometric form join elegance to function.

A soft light escaping from behind the backrest builds an atmosphere of rest and gives the interior its distinct character. Every detail here was chosen to create a space given to regeneration.

Pro Line

Bench and headrest: abachi thermo

O2

Pro Line

EOS heater with steamer: anthracite

O3

Pro Line

Infrared-emitter backrest: abachi thermo

O4

Pro Line

Vertical door handle: abachi thermo

O1

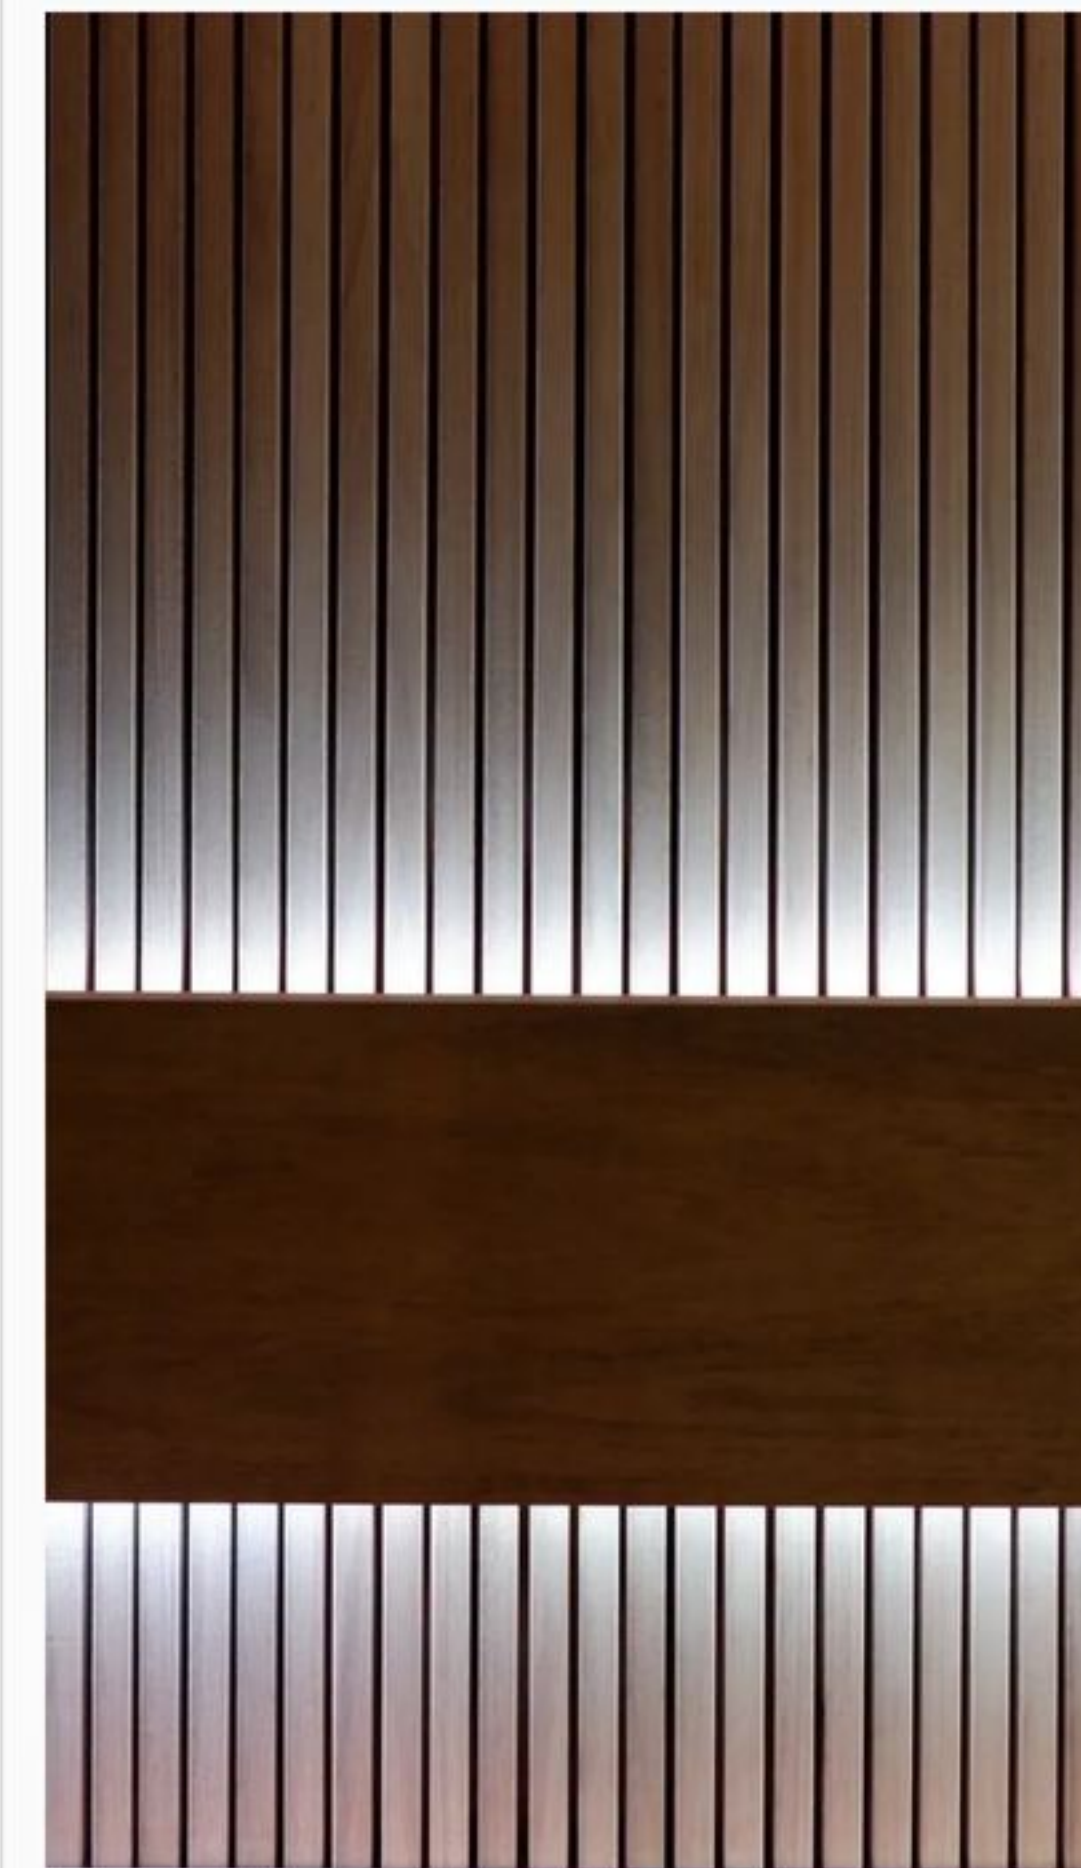

Pro Line

The Pro Line model

The interior is finished in vertically laid solid wooden lamellas. Abachi is standard, prized for its low thermal conductivity and comfort in use. Optionally, heat-treated abachi thermo with increased stability.

The benches are of solid construction, in abachi or abachi thermo. The upper backrest, accented with LED lighting, is made from a single solid element 28 mm thick.

The external portal, in solid wood colour-matched to the interior, extends the composition. Glazing in 10 mm tempered float glass: transparent, optionally optiwhite, brown, or graphite in two shades.

02

Modern Line

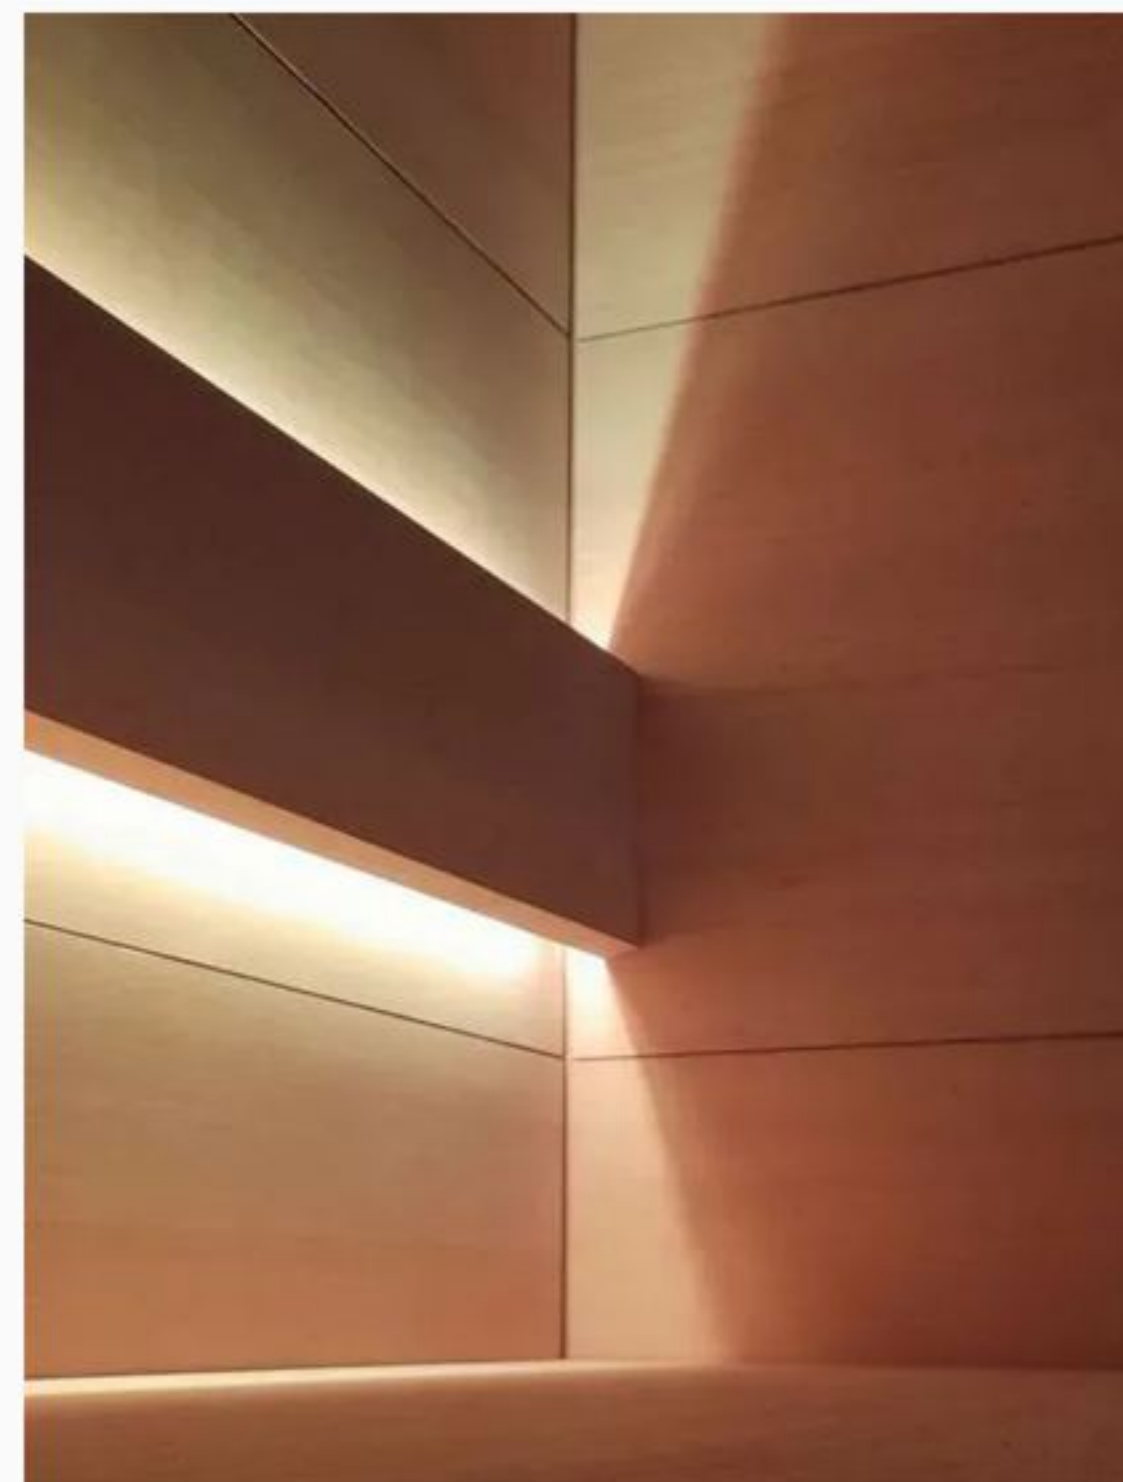

Modern Line

A sauna for those who seek quiet, order and deliberately designed detail in modern form. The space is reduced to what is essential, so the whole radiates calm and visual balance.

The walls are finished in veneered panels of a regular, geometric rhythm. The striking accent is the benches: a dynamic, irregular form that breaks the minimalism and gives the space its own character.

*Modern Line*Walls and ceiling in veneered panels:
hemlock veneer

O4

Modern Line

Door handle: broken form, abachi

02

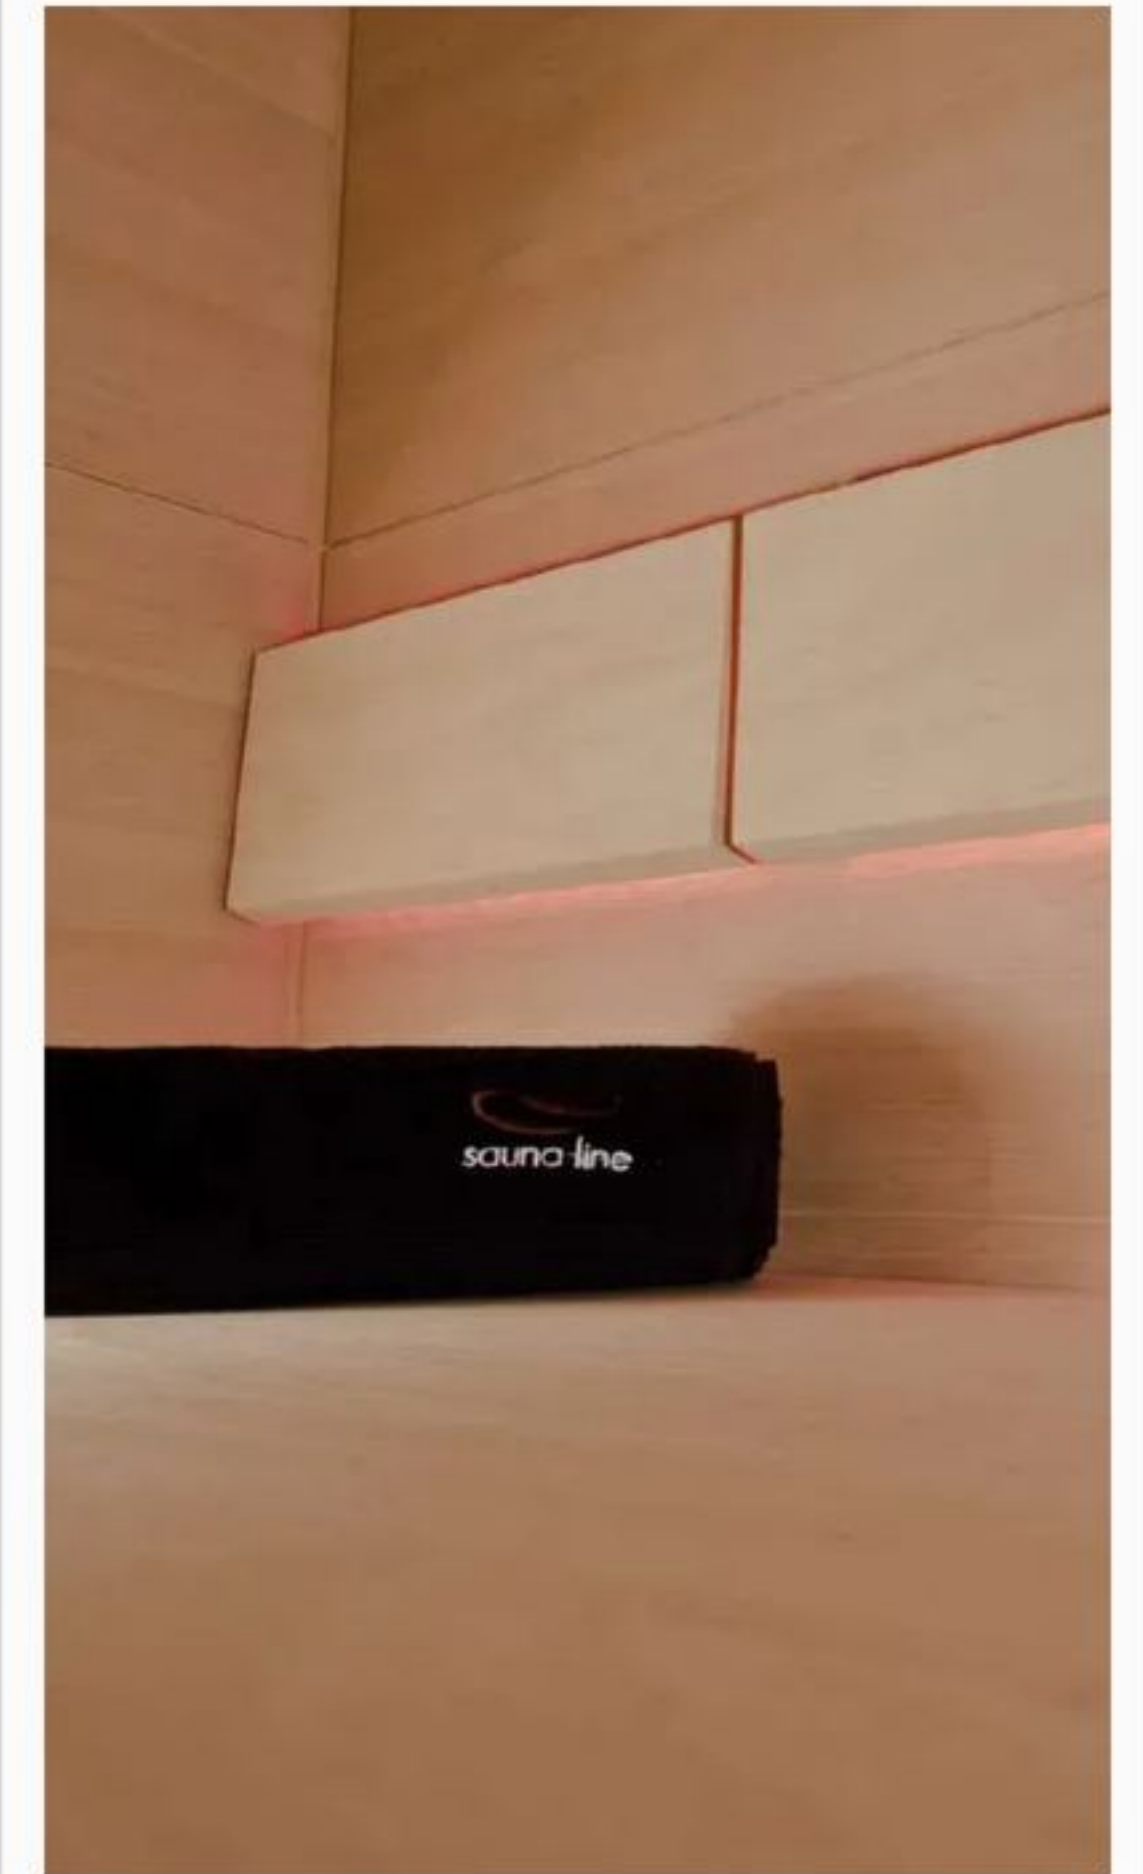

Modern Line

The Modern Line model

The interior is finished in veneered panels. Canadian hemlock veneer is standard: a wood of light tone and delicate grain. Optionally black locust, of deeper colour and pronounced grain.

The full benches of characteristic broken form, and the additional seat, are made of abachi. Bench fronts are finished with subtle undercuts that underline the lightness of the form and the precision of the making.

The upper backrest, integrated with LED lighting, consists of two solid abachi elements 28 mm thick. The door handle repeats the broken geometry of the benches. Glazing in 10 mm tempered float glass.

03

Best Line

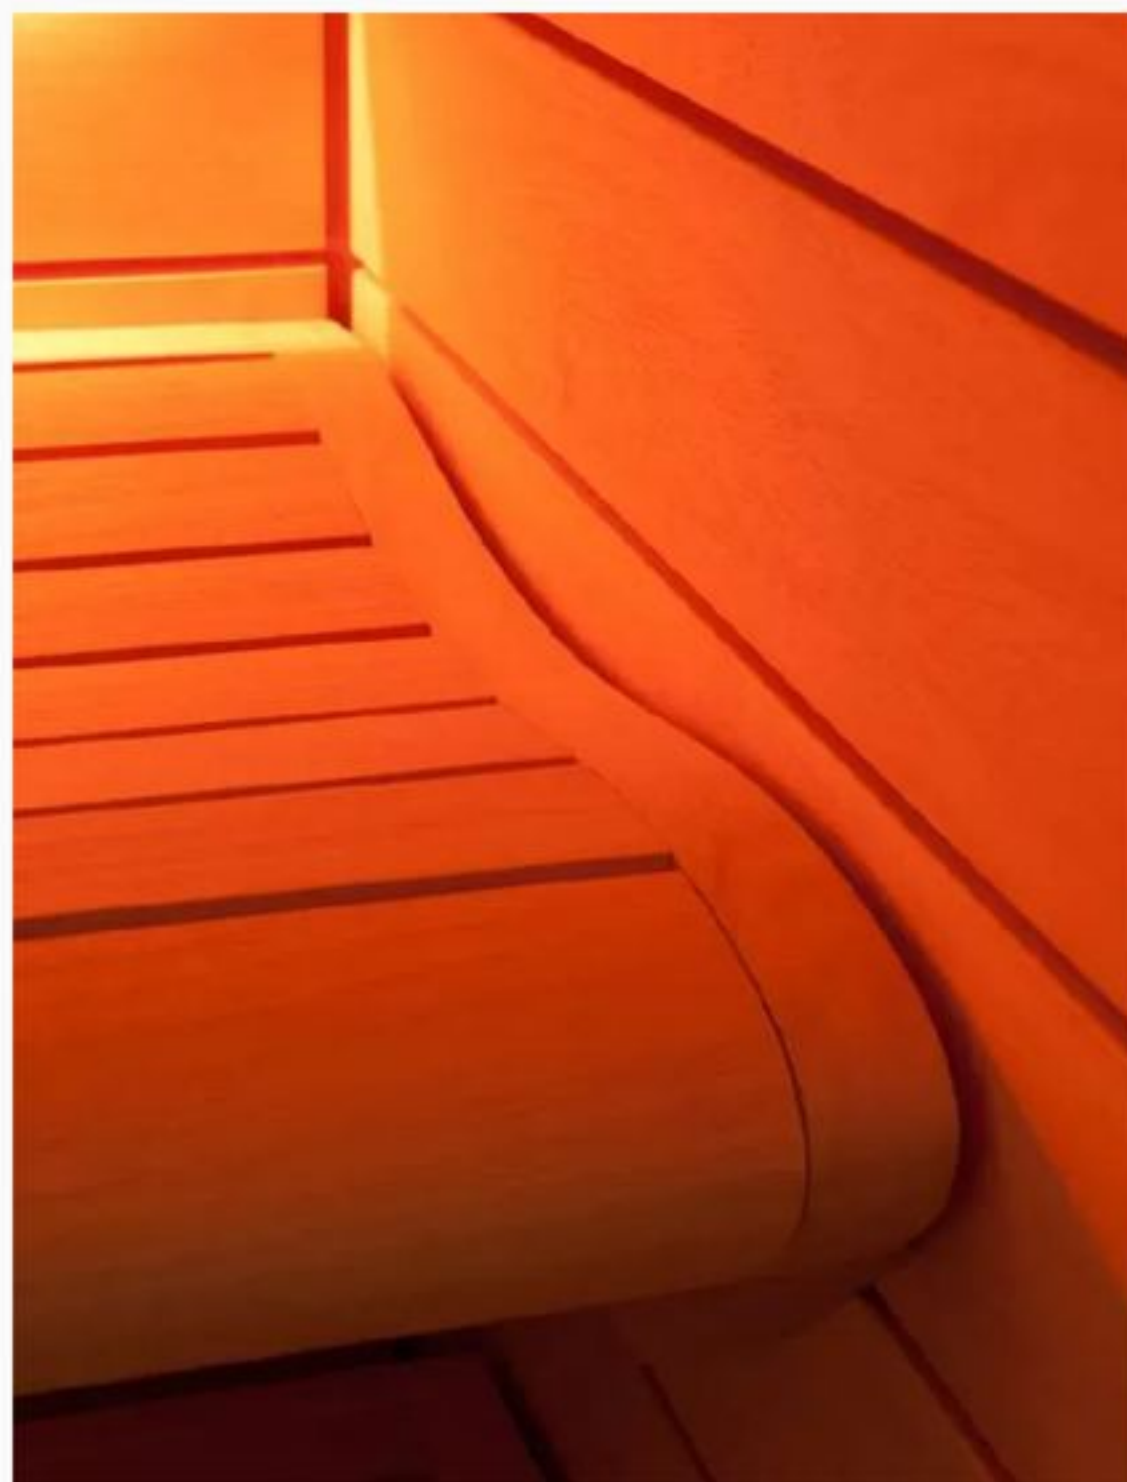

Best Line

A series conceived as a nod to classical design, enriched with contemporary solutions. It is the one line in the collection where the traditional form of the benches is so clearly expressed: their profile and ergonomics give comfort and a timeless character.

Solid benches of classical line sit at the centre of the arrangement. Subtle, adjustable LED lighting lets you shape an atmosphere given to stillness and rest.

03

Best Line

O1

Best Line

Traditional profiled plank benches: abachi

O2

Best Line

The interior entirely in abachi

O3

Best Line

Upper-bench backrest with milled pattern

O4

Best Line

Headrest for the profiled bench: abachi thermo

03

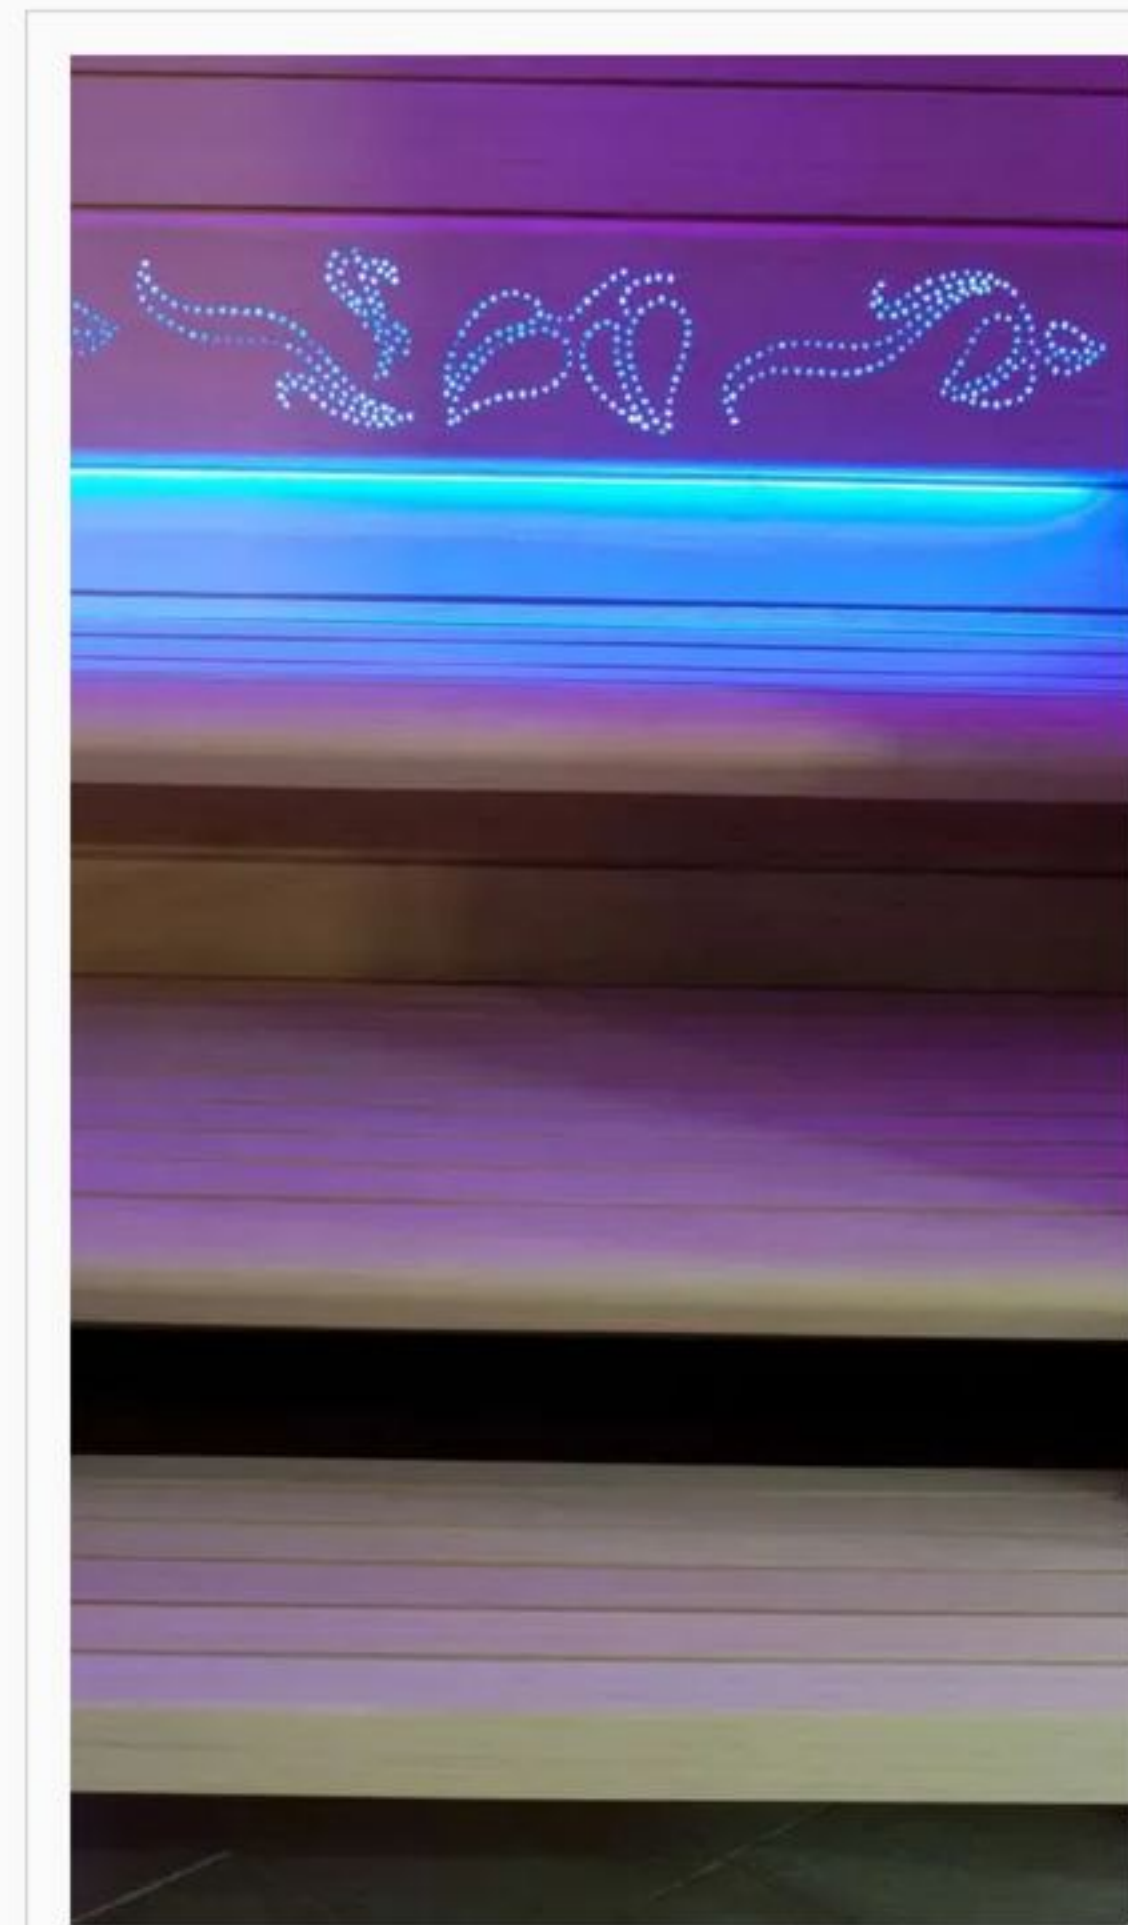

Best Line

The Best Line model

The interior is made entirely of wide solid planks. Exotic abachi is standard; the extended version offers abachi thermo, deeper in tone and more resistant to sauna conditions.

The classical, ergonomically profiled benches are made from the same species as the interior. The upper backrest, underlined with LED light, is solid wood 28 mm thick: smooth, or with decorative milling inspired by broderie anglaise.

The external portal is made of wood colour-matched to the interior finish. Glazing in 10 mm tempered float glass: transparent, with a choice of four additional colour options.

04

Perfect Line

Perfect Line

A sauna that holds attention through balanced form and care for every detail. Its restrained interior is completed by atmospheric, multi-colour LED lighting. Extensive glazing opens the space and lends the whole a lightness.

Benches with subtle milling sit in harmony with the geometric composition of the volume. A space where minimalism meets elegance: pure form and quality without compromise.

rest: abachi

O4

Perfect Line

Walls and ceiling in veneered sauna board: hemlock

04

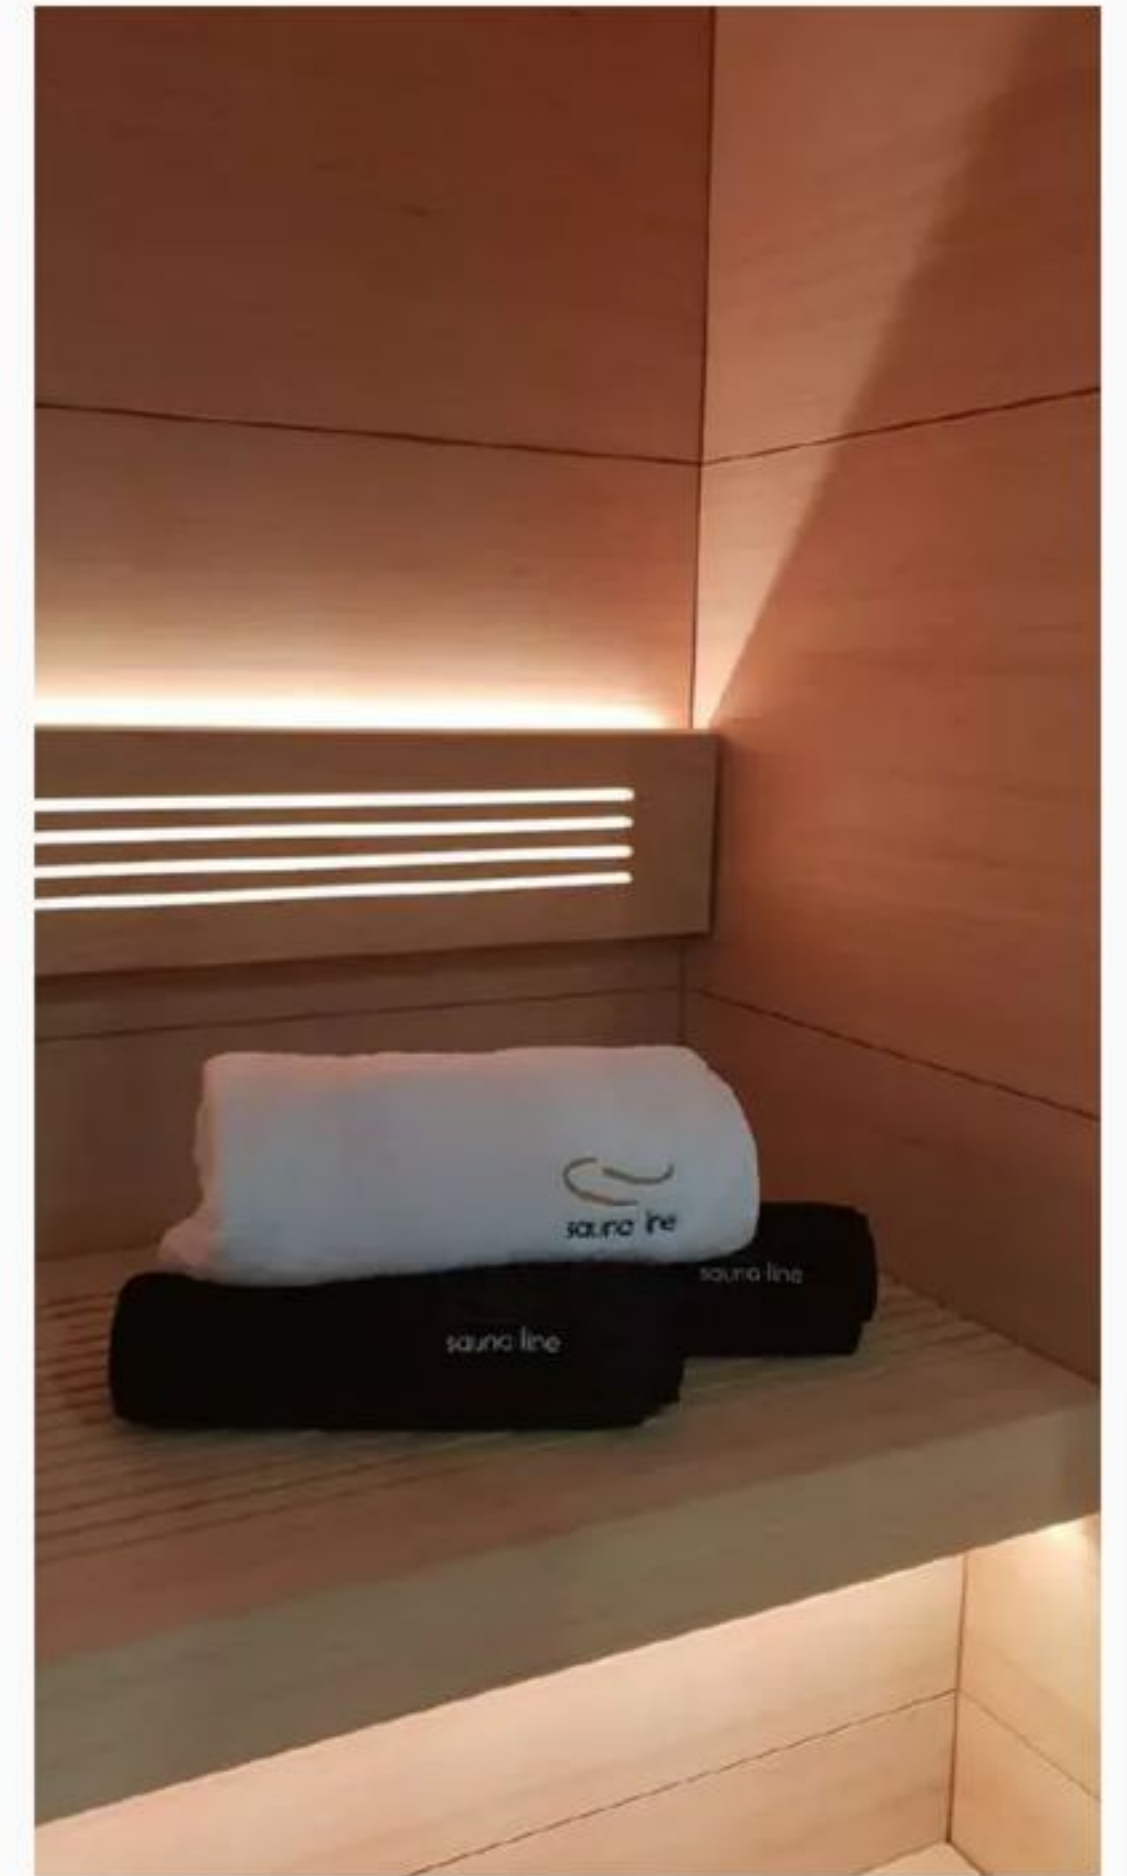

Perfect Line

The Perfect Line model

The interior is finished in veneered panels. Sauna boards faced with Canadian hemlock veneer are standard, prized for a light, warm tone. Optionally black locust veneer, deeper in shade, with a more pronounced structure.

The full benches with delicate milling are made of abachi. The upper backrest, also milled and integrated with LED lighting, is made from a single solid element 28 mm thick.

The external portal is made of the same species as the benches and backrest. Glazing in 10 mm tempered, transparent float glass.

05

Infrared Line

Infrared Line

Advanced technology, elegantly resolved: a line created for those who want an alternative to the traditional Finnish sauna. Infrared emitters act directly on the body, supporting muscle release, circulation and faster recovery.

The models can stand alone as a space for rest, or complement a classical sauna. Considered lighting and careful finishing build a harmonious zone of calm.

05

Infrared Line

Infrared Line

Two-person infrared sauna: abachi

O2

Infrared Line

IR-emitter backrest: abachi

O3

Infrared Line

Infrared sauna portal: abachi

O4

Infrared Line

Sauna door handle: abachi

05

Infrared Line

The Infrared Line model

The interior is formed of vertically laid solid lamellas. Abachi in the base variant; optionally abachi thermo, more stable and deeper in tone.

The full bench is made of abachi or abachi thermo. The backrest and headrest, integrated with LED lighting, are solid wood 28 mm thick. The exterior panels, like the interior, are vertical lamellas.

The sauna carries emitters from a renowned brand, radiating the full infrared spectrum. Glazing in 10 mm float glass; optionally optiwhite, brown, and two shades of graphite.

Touch panel

The Sauna Line controller

The control panel was designed for intuitive use and an aesthetic matched to considered interiors. A touch display with Bluetooth and Wi-Fi manages every key function: the heater, temperature and humidity, lighting and music. Smart-home integration brings the sauna into the ecosystem of the home.

An “eco” mode reads conditions inside the cabin and adjusts the heat automatically, holding a stable temperature while limiting energy use.

Specialist speakers, rated for high temperature and humidity, complete the whole: clean sound that deepens the sense of rest.

Wood

Abachi

A light, stable, crack-resistant exotic species (ayous). Thanks to very low thermal conductivity it stays pleasant to the touch even at high temperatures: ideal for benches, backrests and finishing elements.

Abachi thermo

High-temperature treatment increases resistance to moisture and dimensional stability. The wood takes on a deeper, caramel-brown colour and a subtle, pleasant scent, and the process limits susceptibility to fungi and mould.

Sauna board

A specialist material of layered or solid natural wood. Dimensionally stable, resistant to heat and humidity, with a smooth, resin-free surface, used for walls, ceilings and finishes.

DARK GRAPHITE

Tempered glass

Safe, durable glass, heat-treated to resist impact and high temperatures.

10 mm float glass is standard; optionally optiwhite, and antisol in shades of brown, graphite and dark graphite, so the glazing can be matched to the individual design of the sauna.

SILVER HINGE

BLACK HINGE

Part of the architecture, not a piece of furniture.

Our workshop

It is built here first.

Every sauna is trial-assembled in full in our Krosno workshop. Only then does it travel to the client. Opposite: a Perfect Line on the assembly floor.

On-site installation is done by the same team that built the sauna. From the first drawing to the first firing of the heater: one responsibility.

We'd be glad to
hear from you
